Appl. No. 10/687,017 Response dated August 29, 2005 Reply to office action of August 1, 2005

Amendments to the Specification

Please replace specific paragraphs of the specification with the paragraphs set out below.

[0059] Each support was treated according to a steam treatment. The steam treatment included

conditions of a water partial pressure of 5.5 bars and a temperature of 225 °C for 2 hours. These

conditions were similar to typical operating conditions of a Fischer-Tropsch process.

[0060] The BET surface area of each support was measured both before and after the steam

treatment. Results are presented in the drawing.

[0061] The following patent applications filed concurrently herewith are hereby incorporated herein

by reference: U.S. Patent Application No. 10/686,977, Attorney Docket No. 1856-27301, entitled

"Fischer-Tropsch Processes and Catalysts Made From a Material Comprising Boehmite"; U.S.

Patent Application No. 10/687,140, Attorney Docket No. 1856-20401, entitled "A Stabilized

Transition Alumina Catalyst Support From Boehmite and Catalysts Made Therefrom"; and U.S.

Patent Application No. 10/687,022, Attorney Docket No. 1856-34101, entitled "Fischer-Tropsch

Processes and Catalysts Using Stabilized Supports".
